Xerox[®] VersaLink[®] Productivity Kit – Multifunction Printer (HDD/SSD)

FEATURES ENABLED WITH THE PRODUCTIVITY KIT

Booklet Creation (Copy)	This feature reduces the original page to fit two images on each side of the printed page, allowing the resulting output to be formatted like a book.
Annotation	Annotations can be added to copied pages; these include the bulleted items.
Page Numbers	
Comments	
Date Stamp	
Bates Stamp	
HDD Overwrite (does not apply to SSD)	Overwrite deletes and overwrites disk sectors that temporarily contain electronic image data. This process is initiated at the completion of each job. It can also be manually initiated or scheduled by administrators and/or users.
• Immediate	
On Demand	
Scheduled	
Storage of Fonts, Macros and Forms/Overlays.	Adding the Productivity Kit (HDD or SSD) allows permanent storage of downloaded PCL and PostScript fonts, as well as storage of Macros and Forms/Overlays that are used in a variable-data workflow. For example, without the Productivity Kit (HDD or SSD), the Xerox Font Management Utility (FMU) will only load fonts into device memory, which will be purged during the next Restart or POPO (Power-Off-Power-On) cycle.

FEATURES ENHANCED WITH THE PRODUCTIVITY KIT

Local User Profiles Increases from 50 to 1000 	The storage of local user profiles increases from 50 users to 1000. This applies to users who have personalized their experience on the user interface (this is not tied to the Unified Address Book; it supports 2,000 contacts regardless of the productivity kit being present).
Stored Jobs	The maximum number of stored jobs does not change, but larger jobs can be stored.
Secure, Personal and Saved: 1,000	
• Faxed pages: 1,000	
Total saved pages: 9,999	
Accounting	Additional users can be tracked using Xerox [®] Standard Accounting and many more jobs can be tracked in JBA.
 Xerox[®] Standard Accounting increases from 1,000 to 9,999 	
 Job Based Accounting (JBA) IDs increase from 1,000 to 60,000 	
App storage	The number of installable apps does not change, but the space individual apps can use increases. All apps share 60 MB of space without HDD/SSD; this increases to 2 GB with HDD/SSD. Most apps are 2 to 4 MB in size.
• App storage increases from 60 MB to 2 GB	
• Maximum of 64 apps regardless of HDD/SSD (including 4 inbox)	
Scan Ahead (Concurrency)	Scan ahead programming gives users the ability to accomplish multiple tasks while interacting with the MFP. Users can concurrently scan additional jobs as the original job processes, providing true multi-tasking.
• The number of jobs that can be concurrently queued (scanned ahead) is not a set number. The limit for queuing jobs is based on available memory capacity and the complexity and size of the jobs being queued. The addition of the productivity kit increases the capacity available for queuing concurrent jobs.
